Abstract (en)

[origin: EP0767310A2] The device has a hydraulic actuator (2) with control piston (12). The piston has a piston section (16) which together with the valve slide (20) forms the servo valve (4) including valve return control. The piston section has a valve outlet (32,34), opening into the working chamber (8,10) in the area of the control piston. Hydraulic pressure source (P) and return (R) may be connected to the working chamber, via separate hydraulic lines (40,42), one of which contains the servo valve. The other line may contain a control valve (44). This is switched dependent upon the pressure level in the working chamber, and opposite to the servo valve.
