Abstract (en)  
[origin: DE19536071C1] The pushbutton device includes a shearing device between the moving pushbutton and the stationary part on a base plate, which prevents off-centre operation of the pushbutton. The shearing device has shearing arms whose guide bushes (8) are positioned in the guide slots of the fixed pushbutton part . The shearing arms are springy and springingly engage in the guide slots of the fixed pushbutton part up to the bushes through slanting faces on the guide bush end walls, which support themselves when inserted at the guide slot walls (12).
