Abstract (en)

[origin: WO9518038A1] A method of manipulating a connecting element in shipping, in which at least a free end of at least one connecting element is moved between an object to be called tug, such as a tugboat or a mooring installation, and an object to be towed, to be called tow, such as a seagoing vessel or an offshore installation, and is fastened to the tow or unfastened therefrom. The connecting element is gripped from the tug with a manipulator and is manipulated in such a manner that at least the movement of the free end between the tug and the tow is manipulator controlled.
