Abstract (en)
[origin: DE4443502A1] A device (1) has several components, of which at least one rotary throttle member arranged in a throttle valve pipe (11) and capable of being actuated by a throttle pipe regulating engine (3), an electronic controller (4), a regenerating valve (5) and/or an air volume meter (20). All these components are contained in a common housing (10) and form a modular unit that can be preassembled. This device is suitable in particular for mixture-compressing, spark ignited internal combustion engines.
