Abstract (en)

[origin: WO9535466A1] The invention relates to a device for distributing air in a room with a pressurised chamber (1) having a large air outlet aperture (2) covered by an air-permeable fabric (4). In order to obtain a more uniform air distribution without any visible soiling of the air outlet area, the invention proposes that the fabric (4) have two spaced fabric layers (5, 6) through which the air passes in succession.
