Abstract (en)

[origin: EP0768188A1] The holder/dispenser is designed to hold a block of sheets of the same size, attached by their upper edges to an adhesive strip (8). The sheets are of waxed paper or a thermo-sealable material, and are attached to the strip, which is of card, by a coating of a hot melt adhesive 0.03 to 0.5 mm thick and with a melting point of 60 - 85 deg C, measured by the ball and ring test. The card strip (8) has a flap (9) hinged to at least one of its edges, by which it can be suspended from a hook. The holder/dispenser can also incorporate a rear support, made from cut and folded card, which supports the lower ends of the suspended sheets, e.g. with their edges turned up for easy removal of the top sheet.
