Abstract (en)
The invention relates to a healdframe of a weaving machine whose frame (1) consists of heald rods (2,3) situated over each other and fixed in side walls (4), the frame (1) being in drive connection with a shed mechanism (11), each frame (1) comprising two rows of healds (8) situated one after the other along the whole of the weaving width. Each frame (1) of the healdframe consists of a couple of upper heald rods (2) and of a couple of lower heald rods (3) fixed into one right-side side wall (4) and into one left-side side wall (4). <IMAGE>
