Abstract (en)

[origin: EP0768436A2] The drain has a shaft (1) with intake (8), outlet (11), and filter (14) between them. The shaft is divided by the filter into a first dirt collector part (24) and a second maintenance part (25). The intake is directly connected to the first part, and the outlet is connected to the second part. The second part has an associated maintenance opening, which gives access to the outlet even when the filter is fitted. Intake and maintenance opening are positioned at a distance to each other and are independent. The shaft has a top cover (7), with a passage, which forms the intake and/or the maintenance opening.
