Abstract (en)

The receiver converts digital signals into traffic information using a table. The signals from the decoder are fed via a data link to a navigation system with a route data memory. The navigation system contains the table and generates the traffic information. The navigation system converts the traffic information into acoustic form via a speech memory and can output the traffic information in visual form. The information is recorded in map section form. The navigation system feeds the traffic information into the planned route and can store at least some of the digital signals.

Abstract (de)

Bei einem Funksignalempfänger für Kraftfahrzeuge mit einem Rundfunkempfänger mit RDS-Dekoder für digitale Signale, die über eine Tabelle in eine Verkehrsinformation umsetzbar sind, sind die Signale vom Dekoder über eine Datenverbindung zu einem mit einem Routendatenpeicher versehenen Navigationssystem weitergebar, das die Verkehrsinformation erzeugt.
