Abstract (en)
[origin: EP0768635A1] On the open side of the pocket (20), an external film (22) has a flange (28) to fix the film and a means to hold it in tension while an internal film has an additional, separate means to fix the film to the frame. Two or more hooks, attached to straps on the upper edge of the display, hook in corresponding holes in the interior of the pocket. The pocket is open at the lower side and a rotating axle raises the hooks from a lower position corresponding to the introduction of the display to a high position corresponding to the display being in place. The display is illuminated by rear lighting (5).
