Abstract (en)

[origin: FR2695324A1] A ski of the type incorporating binding attachment means has on its upper surface (14) and an elongate projection (20) having opposite surfaces actively participating in the attachment function. Said surfaces constitute at least one of the large faces (22, 24, 26) of said projection (14) to ensure that the binding is positioned transversally on the ski and is adjustable longitudinally. Said projection (14) has advantageously discrete binding positioning means on at least the said face (22, 24, 26). Application to sliding sports.
