Abstract (en)

[origin: WO9600396A1] Disclosed are methods for detecting and adjusting abnormalities in prolactin daily rhythms. Provided is a method comparing a prolactin profile of a vertebrate subject to the prolactin profile of other vertebrate subjects having a normal prolactin profile; and adjusting the prolactin profile of the subject to cause the profile of the subject to conform to (or approach) the normal prolactin profile. Also provided is a method for evaluating the daily prolactin profile of a human subject wherein the method provides for comparing a set of at least two prolactin levels of the human and comparing them to corresponding prolactin levels for healthy humans (or a preestablished average prolactin curve for healthy humans) at the same time points. The method also provides for determining whether a human subject has an abnormal prolactin profile.
