Abstract (en)

[origin: EP0769592A1] The dirt outlet (8) of the container (2) has a conveyor device, which has at least one area extending from the container. The area of the conveyor device extending from the container can be moved from an extending work position into a non-extending travel position, and vice versa. The conveyor device (7) is releasably fitted and has a drive device, preferably formed as a hydraulic motor (14), which is preferably arranged at the rear end of the conveyor input. The area of the conveyor device extending from the container rises to its discharge edge (11) and the container is raisable at the side adjacent to the extending area of the conveyor device.
