Abstract (en)  
The brick has two opposing faces with two grip grooves worked into the same face. Each groove has, starting from the face, a section which extends with one alignment component perpendicular to the face into the brick. The grooves also comprise one section which extends in one direction component parallel to the face in the brick. The first and second sections can have the same alignment or one can extend perpendicular and one parallel to the surface. For manufacture as the mass of the brick hardens so one of the grooves is formed by making a steep angled incision slit in the surface.

Abstract (de)  
Es wird an einem Mauerstein 1 vorgeschlagen, zwei Griffnuten 7 in dieselbe Fläche einzuarbeiten, insbesondere um unabhängig von der Ausdehnung des Steines, den Griffnutabstand entsprechend Normschulterbreite von Menschen realisieren zu können. <IMAGE>
