Abstract (en)

[origin: EP0769604A1] The aperture frame (2) arranged on the outside on the frame profile (1) in the closed state of the window or door engages behind a lug formation (10) on the window pane or door panel frame (3). The lug formation has a flank area (11), which runs parallel to a formed-in area (12) on the aperture frame. The formed-in area on the aperture frame is formed U-fashion with outwardly widened arms (13.1). The freely extending face edge of the aperture frame locates on the pane or panel frame. There is a groove (14) in the face edge, in which a lip seal (15) is arranged. The lip seal engages in a trough or groove in the window pane or door panel frame.
