Abstract (en)
The invention provides a video gaming machine having a touch screen display and a control system which displays game control touch areas and player data input and message areas on the touch screen display to integrate game control and player tracking functions. The data input areas include touch sensitive key areas for inputting alphanumeric information. The message areas can include both alphanumeric text and graphics messages. The control system groups the message and data input key areas in a logical fashion to create a user-friendly graphical interface to the gaming machine data system. In another aspect of the present invention, a second group of key areas is provided which display graphical icons representing services available to the player. <IMAGE>
