Abstract (en)  
[origin: WO9601342A1] In a device in connection with repair of bridge joints, wherein damaged material (5), at least in the area of the upper part of the joint, is to be removed by tearing up or the like, said device comprises an elongate sealing means (7) having such a width that it is insertable into an essentially horizontal position inside a bridge joint slot (4), wherein said elongate means (7) comprises sealing means (13) for achieving at least mainly sealing against torn up material falling down into the joint slot (4), and wherein the device comprises support means (9, 10, 11, 12) for securing in the essential horizontal position within the bridge joint slot. The invention also concerns a method in connection with repair of bridge joint as well as a bridge joint comprising such a device.
