Abstract (en)
[origin: WO9602704A1] A post housing is provided for ground installation of a post, the post housing comprising a tubular sleeve (150) for receiving the post, the sleeve having a portion (158) adapted to releasably secure the post. In some embodiments the means to releasably secure the post is integral with the sleeve. In other embodiments a separate bung (167) may be used, keyed to the sleeve to prevent rotation. The housing provides a highly effective means to erect poles such as traffic light poles, and facilitate their replacement, for example if they are damaged in a traffic accident.
