Abstract (en)
[origin: WO9602023A1] To provide an image-receiving film for electrography which can prevent the occurrence of an oil pooling phenomenon and, at the same time, can enhance oil retention and reduce oiliness to the touch. An image-receiving film for electrography, comprising a transparent substrate and an image-receiving layer provided on at least one surface of said substrate, wherein the image-receiving layer comprises a transparent image-forming resin and, added thereto, 0.1 to 100 parts by weight, based on 100 parts by weight of said image-formable resin, of porous silica having a surface area of not less than 350 m²/g and an average particle diameter in the range of from 0.05 to 100 μ m and/or polysiloxane particles.
