Abstract (en)
[origin: EP0770341A2] Between two shelf uprights (12a,12b) a horizontally running reinforcement component (20a) is arranged. The reinforcement component with at least one outward formation (22a) corresponding to the inward formation (14) of the shelf uprights can be brought into contact with and fixed to at least one of the shelf uprights. The outward formations of two adjacent reinforcement components (20a,20b) are so formed that the outward formation (26a) of one of the two reinforcement components can be brought into positive engagement contact with a second outward formation of the other reinforcement component.
