Abstract (en)
[origin: EP0770739A1] The roofing tile has three longitudinal sections (I,II,III) which are roughly equal, and has head and side grooves. Each section is formed by a trough-like depression, which is connected to a parallel longitudinal web curving upwards. Each side edge (4,5) of the tile forms part of a longitudinal web, and on laying, one web covers a projecting strip (17), which is arranged on the side edge of an adjacent tile, and which has longitudinal grooves for draining water. The roughly saddle shaped longitudinal webs insert into the covering head-side end section of an overlying tile row.
