Abstract (en)
[origin: EP0770758A1] The shutter (10) is fitted especially to a cupboard in which tools are stored, and has profile bars (12) which are connected to one another, and which can be moved longitudinally against one another. The bars can also be pivoted, and a one-piece, flexible connecting element (14) is fastened on their ends on at least one side of the shutter. The bars may each have first and second hollow profiles which extend in the longitudinal direction, and which have complementary shapes. Two or more bars may be connected to one another so that they can pivot, while the first hollow profile of one bar may be arranged positively in the second hollow profile of an adjacent second bar.
