Abstract (en)

[origin: WO9533388A1] The invention relates to swimming trunks made of water-tight material, where the openings (2, 3) for the torso (4) and for the legs (5) are provided with tight-fitting cuffs or similar devices made of elastic material. In order to sealingly bridge over depressions on the surface of the body, e.g. the "ditches" found on each side of the spine, each cuff comprises a tube-shaped channel (7, 8), which extends around the adjacent opening and which to a small extent is filled with a fluid, preferably air.
