Abstract (en)

[origin: WO9636519A1] The passageway for rail vehicles has a locking device actuatable from inside the passage, consisting of a pair of external locking hooks (20, 21) fitted on the vertical support (24) of the main frame of each half-passageway and an actuating device (22) integral in movement therewith on the inside of the support (24). The hooks (20, 21) engage with mating bolts on the opposite support of the other half-passageway. There is also a folding securing device on the inside of the passageway consisting of a ratchet (47) with a tensioning strip (48) to bring the half-passages together.
