Abstract (en)

[origin: WO9603539A1] The device (100) for impregnating a web (1) laterally guided in the width direction with a treatment liquid comprises a tank for the treatment liquid through which the web (1) is taken on an impregnation section and a pair of squeeze rollers (30) arranged above the tank between which the web (1) can be taken from below immediately after leaving the tank. The tank takes the form of a upright flat channel (10), the flat sides (5, 5) of which are tightly opposed, through which the web (1) can be taken upwards, which can be kept full up to an optional level and the lower end (10') of which is limited by a resilient sealing arrangement (20) bearing on the web (1) from both sides.
