Abstract (en)

[origin: WO9602872A1] An electro-photographic printing system is proposed for printing on both sides of a tape-type narrow printing medium (10) and for printing on one side of a wide printing medium or of several parallel narrow printing mediums (10/1, 10/2, 10/3). The proposed system comprises a printing module which is configured for printing on printing mediums of differing widths. Inside the printing module are detachably mounted a feed module and a reversing module (28) by which the narrow recording medium (10) is reversed following printing on its front side and led once again through the printing module to undergo printing on its rear side.
