Abstract (en)

[origin: EP0694897A1] A series of posters or similar panels (4) are attached to individual support sheets (1,2) of flexible material wound at least partly around a drum (5). A control system allows unwinding of the sheets from the drum such that the poster appears in a selected position, e.g. behind a display aperture or window (9). A series of posters may be mounted in slightly varying positions, such that their display positions are in planes (a-e) slightly differently spaced relative to the window. Movement of the support sheets and posters is controlled by traction cords wound around drive pulleys (7), and the posters are secured by transverse bars and lateral fastening strips of the support sheet. <IMAGE>
