Abstract (en)

[origin: EP0771541A1] The beds have a frame (1) which has at least one narrow-wall metal plate (2) on at least one long side. The plate is displaced inwards and its outer surfaces do not project beyond the outline of the mattress (7). The plate is preferably made of aluminium and bent at the corners to form at least part of the foot and part of the head frame. It is attached by bolts to cross beams (8) parallel to the foot and head frames. A mechanism at the base allows the frame to be displaced horizontally and to be adjusted in height.
