Abstract (en)
A non-through score cut (14) is made in the exposed surface of the blister forming sheet (15). The non-through score cut is made from one edge of an individual blister unit (13) to an opposite or adjacent edge. When the blister unit is angulated or flexed back at the non-through score cut, the blister forming sheet will fracture. The smaller portion of the fractured forming sheet, still bonded to the backing material, acts as a tab (20) for peeling the backing sheet (25) from the forming sheet exposing the blister contents. <IMAGE>
