Abstract (en)

[origin: EP0771743A1] The waste bin (8) has a swing lid whose upper side (7) has a smooth flat surface. The lid upper side is displaced in depth relative to a waste bin edge (3,11) such that in the closed position of the swing lid a uniformly high circumferential edge surface (13) results. The height (x) of the edge surface corresponds to about one fifth of an arm length (a) of the swing lid. The lid has a one piece rotary axis (9) and the weight (G) is held on the axis.
