Abstract (en)

[origin: EP0771926A1] The frame consists of an extrusion (1) with a lengthwise wall (11) to cover one edge of the glazed panel and the corresponding edge of the partition opening. The extrusion also has a flat inner member (12) with edges (13,15) to engage with sliders (2) which are inserted and locked in supports (3) anchored in the edge of the partition opening. The lengthwise wall of the main extrusion lies adjacent to a hollow section (10), while holes (18) drilled through the wall where it joins the flat inner member enables moisture from rain or condensation to flow into the hollow member.
