Abstract (en)
[origin: DE19540061C1] The start smoke curve (31) allows a greater injected amount of fuel or with specified engine rpm different from this, than that allowed in the normal operating smoke curve (28), and is called up as an injection amount limiting smoke curve. Depending on the engaged gear change step and/or the vehicle speed, either a normal operating power limiting curve (10) or with a specified engine rpm (9) different from this, a starting operation power limiting curve (18) permitting a larger injection amount is called up, as an injection amount limiting curve.
