Abstract (en)

A toy gun is improved in the structure of a safety and an air shooting unit. The safety has a lock base to push down an activating rod and to move down to hamper a trigger from pulled. One air shooting unit consists of a front air shooter and a rear air shooter formed with a air guide rod as integral and an air stop valve between the two shooters. The air stop valve prevents air flowing. The front air shooter has a center through hole for the air guide rod to extend therein. Another air shooting unit consists of a front air shooter, a rear air shooter, an air guide rod extending in a center through hole of the front air shooter, and a spring provided at a rear end of the air guide rod. <IMAGE>
