Abstract (en)
[origin: EP0772253A1] The connecting element has a connection part (9) such as micro-stripline, Tri-plate line or coplanar line, on the planar structure (14) side which can be brought into contact with at least one planar conducting path (15). A connecting part (4) on the coaxial structure side is arranged at an angle to the first connection part and is connected to a coaxial cable. The connection part on the planar structure side is a planar waveguide which is connected to the connection part on the coaxial structure side inside the outer periphery of the angled connection element. The planar structure element is mounted at right angles to the planar structure.
