Abstract (en)

[origin: JPH09167656A] PROBLEM TO BE SOLVED: To keep well known impedance and make miniaturization possible by making the front part of an outside sleeve in a pin part thin. SOLUTION: An outside sleeve 15 of a pin part 14 has a thin sleeve 18 capable of inserting into a bushing part 1 in the front. An elastic locking hook 19 bent from the thin sleeve 18 is projected outward through an opening 24 of an unlocking sleeve 23 capable of moving in the length direction along the outside sleeve 15 and the thin sleeve 18, and the unlocking sleeve 23 is pressed forward with a front inclined surface 20. The inner edge 13 of a closed sleeve 12 pushed in an outside sleeve 2 of the bushing part 1 forms a stopper for a pressure applying sleeve 9 having a step part, and a locking shoulder for the locking hook 19 in the pin part 14. When a plug-in connector is bound, the whole outer dimension can be kept small by the thin sleeve 18 of the pin part 14.
