Abstract (en)
[origin: US5947154A] PCT No. PCT/EP95/02874 Sec. 371 Date Jan. 27, 1997 Sec. 102(e) Date Jan. 27, 1997 PCT Filed Jul. 21, 1995 PCT Pub. No. WO96/03325 PCT Pub. Date Feb. 8, 1996The container is used for liquids and is equipped with an outlet to which a discharge hose with an interior hose space can be connected. The outlet is disposed in a container wall which encloses an interior space of the container. In the region of the outlet, a through-passage which leads to the interior space of the container, is disposed. The outlet is connected to a two-position valve which has at least two control positions. A discharge position and an aerating position are being provided. In the discharge position, the two-position valve connects the interior space of the container to the interior space of the hose. In the aerating position, the end of the discharge hose, which faces the interior space of the container, is connected to an area outside the container by means of the two-position valve.
