Abstract (en)

[origin: EP0773324A1] The coupling device has a pin (5) which is driven into the end face of one component (1) and a cooperating sleeve (6) driven into the abutting end face of the second component (2). This fits over the projecting end of the pin when the components are brought together. The pin and the sleeve are each surrounded at the component end face by a perpendicular flange disc (8,9). Each has an integral plate (12,13) projecting into the component at right angles.
