Abstract (en)
A marker continuum is disclosed for use in a labelling apparatus in which discrete markers are affixed to articles to be labelled in a labelling direction of the labelling apparatus. The marker continuum includes an upper adhesive tape, a lower adhesive tape and a continuous and amorphous metallic fiber having a circular section and a longitudinal axis disposed between said upper and lower tapes. The longitudinal axis of the metallic fiber is oriented in the labelling direction of the labelling apparatus. The marker continuum can be used in a labelling system which operates at a rate of 40 m/min or faster. <IMAGE>
