Abstract (en)

[origin: JPH09320674A] PROBLEM TO BE SOLVED: To improve a multiplug apparatus as to make manufacturing and driving of the apparatus easy by keeping a window-like open part formed in side face facing to the bottom part of a casing for a plug and a projected part in the bottom part in dynamic connection state. SOLUTION: A single plug having a rectangular casing for a plug is housed in a holder 17 comprising a bottom part 18, two side walls 19, and a web 20 for covering journaled with one side wall 19 in a freely opening manner. The nose part 22 for snap-fitting of the web 20 for covering is engaged with an open part 22 formed in the other side wall 19. A joining part 27 having a bead part 28 for snap-fitting is formed in the center of the bottom part of the holder 17. The window-like open part of the casing for a plug and a projected part 26 formed in the bottom part 18 are joined by the closed web 20 for covering.
