Abstract (en)
[origin: GB2291788A] A display system comprising: a shelf member supportable in cantilever fashion from a vertical wall, and having either a rear portion adapted to be supported in cantilever fashion from a vertical wall, a forward portion adapted to be positioned in longitudinal engagement with the rear portion so as to increase the depth of the shelf member, and edge locking means adapted to secure edges of the rear portion and forward portion together in a load supporting cantilever arrangement, or mounting means integral with the shelf and extending length of the longitudinal edge of the shelf member of a part thereof, whereby the shelf member can be detachably supported in cantilever fashion from a vertical wall, or one or more undercut elongate channels, extending along the upper surface of the shelf member to receive cooperating projections on shelf dividers and the like.
