Abstract (en)

[origin: WO9603912A1] The apparatus comprises within a protection casing side plates provided to position, in the upper portion thereof, a bobine-support (3) of a material roll and, in the lower portion thereof, a drum (4) intended to receive a cutting device (6), and a pressing element (7) in contact with said drum and between which is introduced the tensioned material to be cut. According to the invention, the drum (4), is made with modular elements and comprises three components, one of them being a main body with a small diameter shaft (4.1) which is hollow and susceptible of receiving at each of its quick-mounting or quick-dismounting extremities two assemblies of opposite elements comprising as a single piece a variable length sleeve integral with an end plate.
