Abstract (en)

[origin: EP0774213A1] The method involves veins and leaf material being separated for conditioning, cutting and drying. The veins and the leaf material are then mixed for conditioning and drying together. The tobacco veins before or after the cutting and-or the leaf material, after conditioning are provided with a casing. The veins before cutting are conditioned at a humidity of approximately 24%. The conditioned veins before cutting are stored for at least 1.5 hours, approximately 2 hours, in a closed casing. The veins are cut with a cut width of approximately 0.2 mm. The cut veins are expanded.
