Abstract (en)  
[origin: EP0774283A1] The skate chassis has a support surface (3,4) which receives a boot. It has a lateral web (2) having fixing holes (6) for the skating parts. The manufacturing process consists in cutting in the metal web a shape corresponding to the developed shape of a chassis web. Rigidifying ribs (8,9) are made by stamping in the chassis web. The total developed shape of the chassis is first cut out and the final shape is obtained after folding into a U, after stamping.
