Abstract (en)

[origin: EP0774303A2] The device comprises a transporter (7), one or more issuing devices (8), and a feed (1) for the containers (2,4). The issuing devices have stackers (5). There are loading and feed positions for the containers. The containers for loading are brought from the feed position into the loading position so that the stacker and container act with each other to improve the degree of filling of the container, after which the container can be brought back to the feed position. The stacker is preferably inserted into the container.
