Abstract (en)  
[origin: EP0774583A1] The casing (1) forms part of an in-line pump with a suction inlet (9) and a pressure outlet (10) at opposite ends. The ports (17) for pressure measurement are arranged on an assembly base (8) to which a differential pressure transducer (7) can be connected. The passages leading to these ports are formed by channels lying within the wall (15) of the casing and opening on to the base. Each channel has a transverse bore (16) accessible from the outside into which the transducer is fitted and sealed.
