Abstract (en)

[origin: EP0774606A2] The invention regards a multi-course interception and distribution device for mixed water, particularly for shower-units, and consists of a single device possessing the function both of an interception and distribution valve. This is achieved with a device wherein the interception and distribution controls are arranged in a coaxial position, the incoming conduit for the mixed water being in a central position and the various outlet conduits arranged in a ring around the incoming conduit. <IMAGE>
