Abstract (en)
[origin: WO9534502A1] A measuring/dispensing cap (24) adapted for attachment to an open, upper end of a container (10) includes a top (34) and a peripheral skirt extending downwardly from the top; a partition (20) separating the peripheral skirt into upper and lower sections (26, 28), such that a measuring chamber (32) is defined by the top, said upper section of the skirt and the partition; the partition formed with a weir aperture (22) on one side of a diametrical centerline (39) extending across the partition; and at least one dispensing door (36) pivotally secured to the top and having a hinge axis parallel to the centerline and the weir edge, and wherein a portion of the door opposite the hinge (38) lies on the other side of the diametrical centerline. Optionally, the cap may include a sifter disk (844) underlying the weir panel (824) and rotatable relative thereto.
