Abstract (en)
[origin: DE4427558A1] A temperature sensor (1) has a housing (2) made of an insulating material, a heat conducting element (4) arranged on or forming a wall of the housing (2), a heat sensitive sensor element (6) arranged in the area of and/or pressed against the heat conducting element (4), and at least two connecting elements (8, 9) that project out of the housing. At least one electroconductive pin (10, 11) is provided. One of the ends (12, 13) of the electroconductive pin (10, 11) applies a pressure oriented against the heat conducting element on the sensor element (6) and its other end is supported on the end (16, 17) of one of both connecting elements (8, 9) located inside the housing or on the ends (16, 17) of separate fixed parts of contact springs.
