Abstract (en)  
[origin: EP0775507A1] The ski fixing comprises a base plate (1) having holes (10) for the passage of fixing screws (8). The screws are supported exclusively on the base plate on which is mounted a boot restraining system and a ski brake which can be dismantled. The ski brake comprises a base plate (5), which is assembled to the ski base plate by a screw, and a brake arm (6). The brake base plate has holes (12) enabling passage of a tool to the screws fixing the ski base plate. The brake base plate holes which are superposed over the holes in the ski base plate have removable plugs (19). The brake base plate holes have a smaller diameter than that of the screw heads. The brake base plate and the ski base plate are assembled together by fasteners (17,18) and a single screw.
