Abstract (en)

[origin: EP0775640A2] The bag has four sides protruding at the bag's open end and folded over the contents. Two opposite facing first projecting pieces are folded onto the free side of the product to form an equilateral triangle with base next to one product-edge and with sides sloping inwards to the product side. The two other second protruding pieces retain their rectangular shape and are folded onto the triangles and joined in their overlapping part (L). The angle between the triangle sides and base is less than 45 degrees.
